Education

University of Toronto

Graduated Jun 2026

B.A.Sc in Computer Engineering, Minor in Artificial Intelligence

3.89/4.0 cGPA

- Graduated with High Honours (Top ~5%), Dean's List in All Semesters
- NSERC Undergraduate Student Research Award (2023), Teaching Assistant (Fall 2024)

Experience

Robinhood

Sep 2025 – Dec 2025

Software Engineer Intern

Toronto, ON

- Built a gRPC-based validation service in Go that automated field checks and auto-populated missing required data in financial crime case forms in a Kubernetes cluster, cutting handle time by **10s per case**
- Built an eval-driven AI agent that rewrites Python API endpoints in Go, cutting migration time from **8 to 3 hours**
- Unified two sources of truth into a single enum-typed form column in Go/Postgres and migrated **5k+** user-facing rows

Patreon

May 2025 – Aug 2025

Software Engineer Intern

New York, NY

- Eliminated **100+ engineer-hours/week** of manual security triage by engineering a fully automated vulnerability tracker on AWS (Python, Lambda, DynamoDB, EventBridge) that ingested and correlated **6,000+ vulnerabilities/day**
- Leveraged and fine-tuned **AWS Bedrock LLM** to classify vulnerabilities against the company tech stack, eliminating false positives and surfacing **3 critical-severity exploits**, preventing potential production outages
- Increased release reliability by automating **CI/CD pipelines** in CircleCI with Terraform for setup and testing
- Saved **\$100k+ annually** and delivered results **4–5 days faster** by extracting vulnerability insights from Hacker News

Mozilla Corporation (Firefox)

Jan 2025 – Apr 2025

Software Engineer Intern

Toronto, ON

- Integrated **DNS over HTTPS (DoH)**  into Firefox for Android using Kotlin, Jetpack Compose, and Redux architecture, leveraging GeckoView to deliver desktop-level privacy for over **178 million mobile users**
- Implemented WebTransport datagram send/receive over **HTTP/2** in C++, making Firefox the **first browser** to support HTTP/2 fallback and enabling developers to build and test next-gen protocols in Firefox

Mozilla Corporation (Firefox)

May 2024 – Dec 2024

Software Engineer Intern

Toronto, ON

- Integrated **Microsoft Entra SSO**  for Firefox on macOS via Apple's Authorization API using Objective-C, enabling seamless access for over **7 million users** and leading cross-company discussions with **Microsoft**
- Enhanced Firefox's URL parsing layer across **25+ schemes and encodings** with C++, JavaScript, and Rust, boosting Firefox Nightly's Interop 2024 URL score to **99.3%**  — surpassing most major browsers
- Migrated **50+ networking Telemetry probes** to Glean API and built a Redash dashboard, used weekly by **10+ engineers** to identify and resolve performance issues on Firefox Desktop and Android

iQua Research Group

May 2023 – Aug 2023

Distributed Systems Research Intern

Toronto, ON

- Developed a max-min fairness algorithm using linear programming, applied to bandwidth optimization across Dockerized network nodes with centralized metric collection, contributing to ongoing research in distributed systems

Projects & Extracurriculars

UofTHacks Organizer Team | [Website](#)

- Enabled seamless access for **1,000+ participants** by engineering a web platform (main site, admin portal, applicant dashboard) for **Canada's largest student-run hackathon**

Skills

Languages: Python, C, C++, JavaScript, Java, Kotlin, Rust, HTML, CSS, SQL, Objective-C, Go

Miscellaneous: Redux, React.js, Next.js, Node.js, Express.js, REST API, Pydantic, CI/CD, Docker, Kubernetes, Terraform, AWS (Lambda, S3, DynamoDB, CloudWatch, Bedrock)
